

## Scientific study summary

The percentage of sufferers who saw an improvement or complete disappearance in their symptoms by condition:

- Tendonitis 97%
- Sports injury 100%
- Arthritis 99%
- Sciatica 94%
- Psoriasis 93%
- Eczema 93%

## Benefits

- Improve poor circulation
- Reduce swelling
- Speed recovery
- Support weak and damaged joints and muscles
- Reduce fatigue
- Thermoregulatory action
- Anti-bacterial action

The TexUp supports are the result of important contributions made by a number of international institutes of research that during the 50s experimented to find suitable material for the aerospace industry. An offshoot of that research has led to the development of this ground breaking fibre—NEXUS ENERGY SOURCE, formed by three natural elements

PLATINUM    TITANIUM    ALUMINIUM

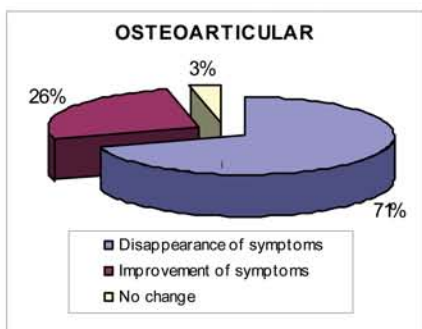

The 3 elements allow Nexus Energy Source to maximise the role of water in carrying out major biological processes within our body.

A man's body averages 60 % water, women average 55%. Water forms our organic tissues and blood and its free flow between body cells is important for maximum wellbeing. Occasionally water molecules group in a way that forms clusters without charge. These clusters are rather big, slow and, being without charge they do not adhere to any other substances (which are normally carried around the body to allow perfect function and equilibrium).

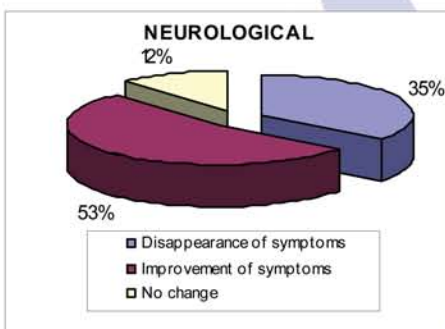

The three elements, platinum, titanium and aluminium form 75% of the material in the TexUp products and, in resonance with each other, emit between 4 to 14 microns of energy. This energy works on the bond between hydrogen and oxygen encouraging the vibration of the molecules. As a consequence the molecules are smaller, quicker in movement, rich in charge and ready to bind to another substance. They go through the membrane of the cells quicker and without loss of energy, carrying with them other substances that promote blood flow and prolong uniformed movement and overall wellbeing.

Tests of the efficiency of the supports containing adequate percentage of the Nexus fibre have been carried out in the health structures in the North of Italy, based on a Survey of 4850 patients between 6 and 91 years old on a range of conditions:

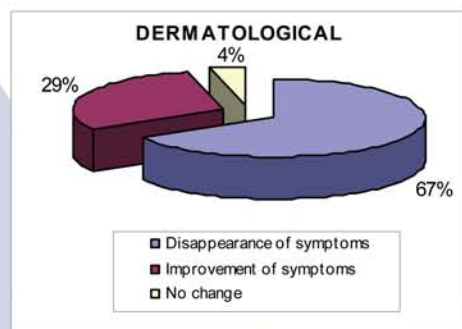

**OSTEOARTICULAR**

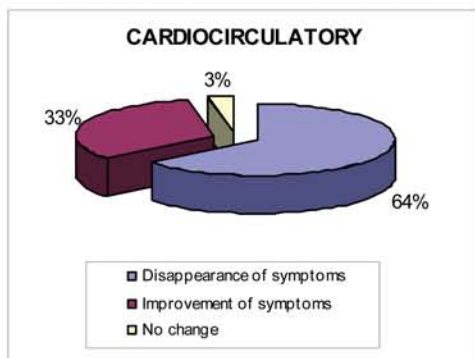

**NEUROLOGICAL**

**DERMATOLOGICAL**

**CARDIOCIRCULATORY**

**SPORT PROBLEMS**
